PROFESSIONAL SUMMARY

Software Engineer with over 4 years of experience specializing in **Go (Golang)**, Python, and Linux systems. Proven track record in building secure mail processing tools, high-performance APIs, and containerized microservices. Frontend experience in **React.js**, **Tailwind CSS**, and **Radix UI** to build accessible, responsive user interfaces managed via **npm**. Expert in backend optimization, achieving a 25% reduction in latency through caching and indexing.

TECHNICAL SKILLS

- **Languages:** Go (Golang), Python, C/C++, SQL (PostgreSQL, MySQL), Bash, JavaScript (ES6+)
- **Backend & Infrastructure:** Docker, Redis, RabbitMQ, Ansible, Git, GitHub Actions, Linux (Ubuntu/Debian) K6(Load Testing), Postman.
- **Libraries/Frameworks:** FastAPI, React.js, Go-fiber, net/textproto, emersion/go-smtp, jhillyerd/enmime, Django, Tailwind CSS, Radix UI, Jotai, TanStack Query, and Axios.
- **Systems:** Postfix, Dovecot, Zabbix, LDAP, SMTP/IMAP/POP3 protocols,
- **Data Structures & Algorithms:** Arrays, Linked Lists, Stacks, Queues, Trees, Graphs, Sorting & Searching.

PROFESSIONAL EXPERIENCE

- **Yukthi Systems Pvt. Ltd. | Software Engineer**
Remote | September 2022 – Current
 - o **Go Mail Filter Development:** Engineered a Postfix Content-Filter in Go, utilizing emersion/go-smtp and net/textproto to parse mail and manage SMTP server responses. Custom rules for the mail filtering. Spam score detection based on score performing the spam filtering.
 - o **Authentication & Security:** Developed a Go-based tool for Dovecot post-login to implement two-factor authentication (2FA) over IMAP and POP3 connections. Along with Postfix added real time rate limiting for sending emails (smtp 465,587)

- **Performance Engineering:** Conducted API profiling and implemented database indexing/cached queries, resulting in a **25% decrease in API response time**.
 - **Messaging Systems:** Integrated **RabbitMQ** within Go services to handle standard messaging protocols and task distribution.
 - **System Tools:** Crafted a Go utility to fetch LDAP user details and export them to CSV for administrative reporting.
 - **Modern Frontend Development:** Partially worked on Web Mail application and the Mail service admin panel with React.js, Tailwind CSS, and Radix UI, managing dependencies via npm, Jotai, Axios, Tanstack Query, for a scalable and accessible UI.
 - **Email Authentication & DNS Automation:** Engineered a Go service to automate DKIM key generation, storage, and DNS provisioning. Implemented secure private key management on Linux and integrated with Linode DNS API for real-time TXT record updates, streamlining domain email authentication workflows and improving deliverability.
- **Yukthi Systems Pvt. Ltd. | Linux System Administrator**
Remote | September 2021 – September 2022
 - **Infrastructure Management:** Provided technical support for Linux server administration and email services for clients such as Namma Metro and Dhanlaxmi Bank, Can Fin Homes, Ujjivan SMTP Service.
 - **Containerization:** Standardized applications into **Docker** containers and managed GitHub automation workflows.
 - **Automation:** Authored Bash scripts for automated monitoring of CPU utilization, disk usage, and service statuses.
 - **Service Configuration:** Installed and optimized Postfix, Dovecot, Zabbix, and Nextcloud environments.

EDUCATION

- | | |
|--|--|
| - Karnatak University
Master of Science in Computer Science
CGPA: 7.61/10 | Dharwad, Karnataka
Dec 2018 – Sep 2020 |
| - GOVT First Grade College, Thirthahalli
Bachelor of Science in Computer Science | Thirthahalli, Karnataka
Nov 2015 – Apr 2018 |

KEY PROJECTS

- **IMAP API Gateway** | *Golang, Go-Fiber, emersion/go-imap, Docker*

Developing a high-performance IMAP API using Go-Fiber and emersion/go-imap to bridge frontend requests with backend IMAP servers.

Implementing Redis for efficient session caching and user authentication.

- **Go-Fiber-SMTP-API-Gateway** | *Golang, Go-Fiber, net/textproto, Docker*

Developed a high-performance SMTP API Gateway that enables direct mail delivery to MX relay servers, bypassing traditional intermediate mail transfer agents (MTAs).

Engineered custom SMTP communication logic using net/textproto and enmime, allowing for granular handling of raw SMTP status codes and server responses.

Implemented a soft-retry mechanism and real-time connection monitoring to ensure high deliverability and accurate API feedback based on remote server availability.

Containerized the service for consistent deployment across distributed environments.

- **Che-Chat (Real-time Messaging Platform)** | *Golang, WebSockets, PostgreSQL, Goose*

Architected a full-stack chat application using Go-Fiber and WebSockets, focusing on low-latency bidirectional communication and high concurrency.

Implemented a Clean/Layered Architecture (Services, Repository, Middleware), ensuring a decoupled codebase that is easily unit-tested and scalable.

Built custom middleware for real-time content moderation, including a profanity filter and inappropriate content logic to maintain platform safety.

Managed relational data integrity using PostgreSQL with Goose for version-controlled schema migrations.

- **Farmer's Friend (E-Commerce)** | *PHP, MySQL, Google Map API, SMS OTP gateway*

Developed a full-stack PHP/MySQL application for agricultural trade, integrating Google Maps APIs for location pinning. Implemented OTP-based authentication via SMS Gateway APIs for secure seller-buyer communication.

CERTIFICATIONS

- **Go Bootcamp:** Master Golang with 1000+ Exercises and Projects ([Udemy](#))

- **Python and Django Full Stack Web Developer Bootcamp** ([Udemy](#))
